

USE INSTRUCTIONS

For The Natural Solution Pool Treatment

QUESTIONS? Call: **1-800-693-0585**

GETTING STARTED: DAY 1

Adjust the alkalinity between 80 and 110.

Adjust the pH to approx. 7.3.

Always start with clean fresh water. If you haven't drained and refilled the pool and there is any visible alga or a chance there is any algae (greener than normal water) in the pool, it is recommended you shock with 1lb of chlorine per 10,000 gallons of water and use a non-metallic algaecide according to the directions on the bottle. Scrub any visible algae with a brush and circulate your pool for 24 hours.

GETTING STARTED: DAY 2

Back wash and or clean filter.

Remove any chlorine or bromine tablets.

Check and adjust the pH if needed to 7.2.

Add the appropriate amount of The Natural Solution Pool Treatment as directed by the table below, by slowly pouring the treatment in as you walk around the pool.

Test pool water with a copper test strip after circulating your pool for 1 hour to verify copper ppm in between 2.5ppm and 3.0ppm and adjust as needed.

Testing your pH is an important factor when using this product. The optimum pH for our pool treatment is 7.2. Keep an eye on it.

<u>Pool Usage Table for The Natural Solution Pool Treatment</u>					
Pool Water (In Gallons):	5,000	10,000	15,000	20,000	30,000
